PROFILE

Data science lead with a PhD in applied statistics and three years building production data products in digital health. I run projects end to end: framing, pipeline, modelling, and the analysis decision-makers act on.

CLOUD & DATA PLATFORMS

Azure Machine Learning, Data Factory, Databricks, Synapse, Data Lake Storage, DevOps · GCP Vertex AI, BigQuery, Dataflow, Composer, Dataproc · Docker, Git, CI/CD, MLflow, Airflow

PROGRAMMING

Python (Scikit-Learn, Pandas, NumPy, Statsmodels, Plotly, PySpark), R (Caret, mclust, ggplot2, Shiny), SQL, SAS, Bash

AI & DEEP LEARNING

PyTorch, TensorFlow / Keras, Hugging Face, XGBoost, LightGBM · CNN, RNN / LSTM, transformers, autoencoders · LLM fine-tuning, RAG, Azure OpenAI

LANGUAGES & INTERESTS

French — native · English — professional
Basketball & tennis, cinema, music

Lead Data Science & R&D

Data science project management · Data engineering · Statistical analysis & reporting · Cloud (Azure / GCP)

EXPERIENCE

Lead Data Science & R&D — DiappyMed

Since 2023 · Toulouse

- Lead the data science and R&D activity: roadmap, scoping, prioritisation and delivery of projects with product, engineering and medical stakeholders.
- Design and operate data processing pipelines — ingestion, cleaning, feature building and orchestration of recurring jobs on Azure.
- Produce statistical analyses and recurring reports on product and health data, from experiment design to interpretation and recommendation.
- Build and validate machine learning and deep learning models, then industrialise them with reproducible training, versioning and monitoring.
- Mentor junior data scientists and interns; set coding, review and documentation standards for the team.

ATER (teaching & research assistant) — INSA Toulouse

2022 – 2023 · Toulouse

- Tutorials and computer labs on lifetime and system reliability: theoretical study of models, application to real data, analysis of results.
- Computer labs on exploratory data analysis and clustering — principal component and clustering methods applied to real datasets.

Data scientist intern — Université d'Évry

Apr – Sep 2019 · Évry

- Identified drivers of student failure with machine learning: dataset construction and cleaning, clustering, cluster analysis.
- Deployed the resulting model as a Shiny application for the teaching staff.

EDUCATION

PhD in Applied Statistics — INSA Toulouse

2019 – 2023

Reliability of reinforced concrete structures and repairable systems; asymptotic statistics and statistical inference.

MSc Data Science — Université Paris-Saclay

2019 · Évry

Machine learning and statistical modelling; Python, R and SQL programming.

BSc Mathematics — Université Nangui Abrogoua

2017 · Abidjan

CORE EXPERTISE

Data science management

Project framing, roadmap, stakeholder alignment, delivery

Statistical modelling

Lifetime, time series, degradation processes, reliability

Deep learning & AI

Neural networks, sequence models, LLM / generative AI applications

Reporting

Analytical reports, dashboards, results communication

Data engineering

ETL/ELT pipelines, orchestration, data quality

Machine learning

Supervised learning, clustering, model validation

Exploratory analysis

PCA, MCA, discriminant analysis

PUBLICATION

Engineering statistical models for carbonation depth.
